DETAILED ACTION

Claim Objections

1. Claims 1 and 4 are objected to because of the following informalities: the claims recite "RACH" without a full description. A full name "Random Access Channel" should be added or substituted. Appropriate correction is required.

Claim Rejections - 35 USC § 112

2. Claims 1-9 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1 includes a limitation "a first adding unit for adding a plurality of multiplication results outputted from said first multiplying unit at specific intervals." However, this claim language is indefinite because of an ambiguous use of the phrase "at specific intervals." It could be read that the adding unit adds a plurality of multiplication results at specific intervals. Another possible reading is that the plurality of multiplication results are outputted from the first multiplying unit at specific intervals and they are added up by the adding unit. In light of the specification and, in particular of Fig. 9, the first interpretation appears to consistent with the present invention. Therefore, for the purpose of examination, the first multiplying unit produces a plurality of multiplication results and the first adding unit adds multiplication results at specific intervals to produce a plurality of addition results. Claim 4 has the same ambiguity concerning the phrase "at specific intervals. Claims 2-3,5-9 are rejected for the same reason as they depending on rejected base claims.

Application/Control Number: 09/837,415

Art Unit: 2634

Confirmation or correction is required.

Allowable Subject Matter

- 3. Claims 1-12 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action.
- 4. The following is a statement of reasons for the indication of allowable subject matter: No prior art has been found to teach a random access channel receiver where a plurality of multiplication results, generated by multiplying a received signal with a long code, are added as specific intervals to produce a plurality of addition results which are in turn multiplied by a second spreading code output a correlation outputs.
- 5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Okumura et al (US 6,724,806) discloses dispreading a signal spread with two spreading codes.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kevin Y Kim whose telephone number is 571-272-3039. The examiner can normally be reached on 8AM --5PM M-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Stephen Chin can be reached on 571-272-3056. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
